SYNTHETIC CONSULTATION NOTE - DEMO DATA ONLY

Patient: SYN-DEMO-0001 MRN: SYN-DEMO-MRN-4471 DOB: 1984-02-11
Program: SYN-DEMO - Suspected inherited metabolic disorder
Consultant: Dr. A. Researcher (synthetic persona) Date: 2026-01-20

REASON FOR CONSULTATION

Three-month history of progressive fatigue and exercise intolerance.
No acute presentations. Family history unremarkable.

SUMMARY

Reviewed the synthetic targeted panel alongside serial blood counts.
The HBB result is the leading candidate and is being correlated against
the rising reticulocyte count. The ABCC8 variant is a secondary consideration.

PLAN

1. Correlate variants with phenotype at the multidisciplinary meeting.
2. Extend analysis to the exome if the panel is non-diagnostic.
3. Genetic counselling referral once a diagnostic result is confirmed.
